

## Start

**“Start” has the day’s learning outcomes.**

**Today’s learning outcomes:** Computer analysis of data is an essential component of modern statistics. Excel is the software that we have chosen to use for analysis because it is widely available and it is used by most researchers at Eastern to manage their data.

*Outcomes: Students know what is contained in a database. Students can use Excel to obtain averages, counts, and sums from a database and can sort a database according to the values of a variable.*
